Euro area economic and financial developments by institutional sector: third quarter of 2017

- Euro area saving (net, as a percentage of disposable income) was higher in the third quarter of 2017 compared to the third quarter of the previous year. Total euro area non-financial investment (net) increased due to higher investment by households and corporations. Euro area net lending to the rest of the world decreased compared to a year ago.
- Household debt was lower compared to a year ago, both with respect to GDP and disposable income (the respective ratios decreased to 58.0% and to 93.0%).
- The non-financial corporations' (NFC's) debt-to-GDP ratio decreased compared to a year ago and stood at 131.4%. Gross non-financial investment increased at a lower annual rate (4.1% after 10.0% in the previous quarter).

Total euro area economy

Euro area net saving, that is the sum of the savings of households, corporations and the government sector after deducting the consumption of fixed capital, increased to 8.2% of euro area net disposable income in

the third quarter of 2017. Euro area net non-financial investment increased to 4.2% of net disposable

income, compared with 3.4% in the third quarter of 2016, as investment by households and non-financial

corporations increased and net investment of government and investment of financial corporations were

broadly unchanged. As a result of the growth of non-financial investment and the growth in saving, euro

area net lending to the rest of the world decreased compared with the third quarter of 2016 (4.0%, after

4.3% of net disposable income). Net lending by households as a percentage of euro area net disposable

income decreased (2.4%, after 2.9%) and the net lending of non-financial corporations also decreased

(1.5%, after 2.7%). Net lending by financial corporations sector increased (1.2%, after 0.9%) and net

borrowing by the government sector decreased compared with the third quarter of 2016. (For details, see

also Table 1 in the Annex).

Households

The annual growth rate of household gross disposable income increased to 3.0% in the third quarter of

2017, from 2.7% in the previous quarter. Gross operating surplus and mixed income from the self-employed

increased by 3.4% in the third quarter of 2017 (after 2.6%) and the compensation of employees grew at a

rate of 3.7% (after 3.5%). Household consumption expenditure grew at an unchanged rate of 3.2%.

The household gross saving rate in the third quarter of 2017 was 12.0%, compared with 12.3% in the same

quarter of the previous year.

The annual growth rate of household gross non-financial investment (which refers mainly to housing)

increased to 6.2% in the third quarter of 2017, from 5.4% in the previous quarter. Loans to households, the

main component of household financing, increased at a broadly unchanged rate of 2.8%.

The annual growth rate of household financial investment was broadly unchanged in the third quarter of

2017 and stood at 2.1%. Among its components, currency and deposits grew at a broadly unchanged rate

of 3.7%. Investment in life insurance and pension schemes grew at a broadly unchanged rate of 2.0%.

Shares and other equity grew at a higher rate of 1.7% (after 1.5%). Investment fund shares grew at a higher

rate of 5.9% (after 5.7%); in particular non-money market fund shares increased at a higher rate.

Investment in debt securities continued to decline at a lower rate of -10.0% (after -10.8%). This

development is in particular due to a reduction of household holdings of debt securities issued by MFIs.

The annual growth rate of household net worth stood at a broadly unchanged rate of 5.0% in the third

quarter of 2017, as investments and net valuation gains on financial and on non-financial assets were only

partly offset by the incurrence of liabilities. The value of housing wealth increased at a higher rate of 5.8%

(after 5.2%). The household debt-to-GDP ratio continued to decrease, to 58.0% in the third quarter of 2017

from 58.4% in the third guarter of 2016.

Notes:

- These data come from a second release of quarterly euro area sector accounts from the European Central Bank (ECB) and Eurostat, the statistical office of the European Union. This release incorporates revisions and completed data for all sectors compared with the first quarterly release on "Euro area households and non-financial corporations" of 12 January 2018. The tables and charts accompanying the present press release are available in the <u>publications section</u> of the Statistical Data Warehouse. The next quarterly press release, with advanced results for households and non-financial corporations, is scheduled for 6 April 2018, while the full <u>release calendar</u> can be found on the ECB website.
- Further data and methodological information are available in the statistics section of the ECB's website under
 Macroeconomic statistics/Sector accounts (direct link to the sector accounts data in the ECB's Statistical Data Warehouse
 Sector account data). A visual presentation of who-to-whom funding relationships between sectors is available in "Our statistics".
- The annual growth rate of non-financial transactions and of outstanding assets and liabilities (stocks) is calculated as the
 percentage change between the value for a given quarter and that value recorded four quarters earlier. The annual growth
 rates used for financial transactions refer to the total value of transactions during the year in relation to the outstanding stock
 a year before.
- Definition of debt used in this release differs from the definition which is applied for the Macroeconomic Imbalance
 Procedure. For details see ECB website. For the MIP data see: <u>Annual scoreboard for the surveillance of macroeconomic imbalances</u>.
- The next release of the <u>Household Sector Report</u> containing results for the euro area and all EU countries is scheduled for 8 February 2018.

¹⁾ Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-1)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the end-of-quarter stock value four quarters earlier.

2) Calculated as 100*(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.
